

Leonid Schreiber – UX Engineer

Satisfaction in functionality and aesthetics

Five years building games and interactive products across design and code, without treating them as separate disciplines. I design in tokens and components because I build that way too. At Paintbucket I implemented Beholder 3's UI as a ScriptableObject-driven token system in Unity. One color value change propagated globally, not per scene-object. At SPICED I designed Rollhaus using Figma variables and modes. Looking for a team that values the overlap.

Experience

01/2026 – 05/2026 @ SPICED Academy, Berlin

UX/UI Design

- Full Double Diamond: research, synthesis, information architecture, wireframing, high-fidelity prototyping, usability testing
- Rollhaus (e-commerce): Figma variable and mode system driving component variants and theming; color token system for consistent propagation
- Fermentor (capstone): communicating fermentation-process state end-to-end on a component and variable system

01/2025 – 01/2026

Independent Developer

- One evolving reusable systems codebase (inventory, stats, combat, modifiers) carried project to project since ~2023
- AI-orchestrated workflow: architecture and direction owned by me, AI executes inside explicit guardrails

07/2024 – 12/2024

@ Thoughtfish, Berlin

Unity Developer

- How to God (VR god-sim on Meta Quest): hired to own UX and game-feel polish
- Designed the gesture-spellcasting system on an existing recognition plugin, training the model across several people to cover individual variation; built grab/haptic feedback and the full input control scheme

04/2023 – 06/2024

Career break

- Family caregiving after the birth of my daughter

09/2022 – 03/2023 @ Grimbart Tales, Kaiserslautern

Unity Developer

- Refactored a stalled prototype and delivered the vertical slice the studio took to a funding pitch.

04/2022 – 08/2022

@ Sorcerers Lab, Berlin

Systems Designer & Developer

- Sole developer on Ruadh: Warbands (tactical turn-based roguelite; shipped to early access in five months). Built data-driven trigger-effect and stat-modifier systems, hex grid with A* pathfinding, unit upgrade system with scaling builds, UI, save/load

09/2020 – 10/2021

@ Paintbucket Games, Berlin

UI Designer & Gameplay Designer

- Beholder 3 (Deutscher Entwicklerpreis 2022: Best Story + Best Game Beyond Entertainment) and Septembertal
- Designed and implemented Beholder 3's UI as a reusable component system with global design tokens, built in Unity, then moved into feature design
- Cross-department coordination: tracked production state across design, art, and code

Skills

Design

- user research, Double Diamond, information architecture, wireframing, high-fidelity prototyping, usability testing, Figma variables & modes, design tokens, component libraries, responsive design, WCAG / accessibility

Engineering

- C# / .NET, OOP, design patterns, event-driven architecture, Unity, WebGL build & deployment

AI Workflow

- orchestration-first: architecture and direction owned by me, AI executes inside explicit guardrails
- tool-agnostic (Claude, ChatGPT)
- GlyphsHero CLAUDE.md is the artifact

Qualities

- systems thinker
- problem solver
- attention to detail

Tools

Languages

German native C# .NET
English fluent

Personal Projects

HellClockBuilder

- Unity WebGL planner consuming live JSON data. Solo, end-to-end: UI design, Unity build, custom shaders, WebGL deployment. The clearest single proof that design and engineering are one workflow for me

Glyphs Hero

- AutoBattler (TFT-style) on a reusable component architecture with AI-orchestrated development. CLAUDE.md in the repo documents the workflow. Active, ongoing

RPG Systems

- Reusable inventory, stat, and combat framework (InventoryTetris / ARPG-Combat). 9 GitHub stars / 4 forks. One architecture, carried across multiple projects

Education

2026

UX/UI Design

- SPICED Academy Berlin

2019 - 2020

Game Designer

- Games Academy Berlin

2014 - 2016

Journeyman – Metal Designer

- Rafael Hohlfeld – Metallgestaltung
